

AGIC/AzGA
GPS in K-12 Education
Free Introductory Workshop
April 5th and May 3rd, 2008

Have you seen people using GPS units to find treasure in the desert or get themselves to their in-law's house? Do you think that Google Maps would be a fun tool to use in your classroom? Are you looking for a new way to get your students using the latest technology in their learning? If so, join us as we demonstrate how to use a GPS unit, review lessons that utilize GPS units, and discuss other ways that GPS can be used in your classroom.

This introductory workshop will be offered on two different dates: Saturday, April 5th and Saturday, May 3rd at Arizona State University's Tempe campus and will run from 9:00-1:00.

Attendance is free and GPS units will be made available for the attendees to use during the workshop. Workshop attendees will **receive 4 recertification hours** and will **walk away with at least 2 ready-to-use hands-on GPS lessons (aligned to Arizona Standards)**.

In a continuing effort to support geospatial education throughout the state, the Arizona Geographic Information Council (AGIC) and the Arizona Geographic Alliance (AzGA) are sponsoring this event. Attendance for each workshop will be capped at 20 people and seats will be filled in the order in which applications are received. If you would like to attend the workshop, please email or fax the following information to Shea Lemar at shea.lemar@asu.edu (fax is 480-965-5077):

Name
School
School District
Grades you Teach
Subjects you Teach
Email Address
Phone Number

Please number your first choice with a 1 and your second choice with a 2.
_____ Saturday, April 5, 2008 _____ Saturday, May 3, 2008

Write a short paragraph describing how you hope to incorporate GPS into your classroom and attach to your registration form.

Please note: you must be a practicing educator in the state of Arizona to attend the workshop.
